

Fig. 1 is a schematic diagram of a multi-layered structure. The structure is divided into three main horizontal regions labeled A, B, and C from right to left. It consists of several layers and components:

- Layer 1:** The bottom-most layer, shown with diagonal hatching.
- Layer 2:** A thin layer above layer 1, also with diagonal hatching.
- Layer 3:** A layer above layer 2, containing vertical line patterns.
- Layer 4:** A layer above layer 3, also with vertical line patterns.
- Layer 5:** A layer above layer 4, with diagonal hatching on its left side.
- Layer 12:** A layer above layer 5, with diagonal hatching on its right side.
- Layer 13:** A layer above layer 12, containing vertical line patterns.
- Layer 14:** The top-most layer, containing vertical line patterns.

 Specific components and features are labeled:

- R:** Points to small rectangular features with internal patterns, located in regions A, B, and C.
- 1:** Points to the bottom-most layer (Layer 1).
- 2:** Points to the thin layer above layer 1 (Layer 2).
- 3:** Points to the layer above layer 2 (Layer 3).
- 4:** Points to the layer above layer 3 (Layer 4).
- 5:** Points to the layer above layer 4 (Layer 5).
- 12:** Points to the layer above layer 5 (Layer 12).
- 13:** Points to the layer above layer 12 (Layer 13).
- 14:** Points to the top-most layer (Layer 14).

 The diagram uses hatching and vertical line patterns to distinguish between different materials or layers within the structure.
